

2020 Statewide Electric Emerging Technologies Request for Abstracts

Clarification Statement

August 24, 2020

SCE's Solicitation for the Statewide Electric Emerging Technologies Program (ETP) is looking for Program Implementers to propose, designing and implement ETP. It is envisioned that Program Implementers will propose new programmatic approach(es) to the ETP, which serves residential and non-residential customers' needs for highly energy efficient equipment, throughout each of the Statewide Electric IOU's service territories.

The solicitation is *not* looking for companies that have new or will have new energy efficiency technologies that they would like to bring to the market. If you or your company has an existing technology that could be considered in the current ET program the websites below provide the requirements for technology evaluation.
